Reasons For Allowance

The present invention is a combustion system that combines a catalytic combustion sub-system with non-catalytic combustion apparatus. Combustion systems that combine catalytic and non-catalytic devices are known in the prior art, but none of the references of record show or fairly suggest a combustion system that includes a catalytic combustion (CAT) sub-system, a dry-low-emissions combustion (DLE) subsystem, a combustor, and a thermal reactor, with all components interconnected as specified in claim 14 such that the thermal reactor is located between the CAT sub-system and the combustor but the DLE sub-system communicates with the combustor independently of the thermal reactor. The claimed invention is therefore considered patentable over the prior art.
